 Modular      Reasonable

## INTRODUCTION:

### The Significance and Benefits of Home Automation Systems

Imagine yourself sitting on the sofa with a remote in your hand with which you can control your entire house. Sounds too good to be true isn't it? But that has become a reality today with the technology brought to you by SmartHomeGroup.

With just one touch on a remote or a wireless tablet, you can change the lighting mode, adjust the temperature for the Air Conditioning, listen to your favourite music, watch movies, view images from your CCTV cameras and much more! And all this can be done from whenever you are in your home.

Various modes can be pre programmed like 'Party Mode' where lights can be dimmed to a particular level, selected music can start playing, window curtains can be opened/closed and room temperature can be set to a required degree; visitor mode, relax mode....the options are endless!

Garden lights, fountains and sprinklers can also be programmed to come on and go off at preset times. With our security system in place, you can rest assured of a good night sleep or a worry free vacation.

In today's technology dominated world, building automation plays an important and essential part in one's day to day living, and this extra cost reflects as an added value to your residential/commercial/leisure project, giving return on your investment.

So call us and.....***LET US BE AN EXTENSION TO YOUR LIMITLESS IMAGINATION.***
